

AI IDEA FORGE

University Capstone Project — QA & Issue Resolution Documentation

AI Product Discovery Platform

Issue Log & QA Resolution Report

Project Name:	AI Idea Forge
Document Title:	AI Product Discovery Platform – Issue Log & QA Resolution Report
Prepared By:	Batch 4 – Group 8
Date:	August 1, 2026
Total Issues Logged:	19

Prepared from a QA and technical documentation perspective, consolidating resolved functional issues identified during application testing and independent QA review.

Table of Contents

AI Product Discovery – Issue Log	3
Issue #1 – Duplicate Analysis Records	3
Issue #2 – Continue Opens Empty Discovery Galaxy	3
Issue #3 – Dashboard Recommendation Cards	3
Issue #4 – Website URL Validation	3
Issue #5 – URL Analysis Flow	4
Issue #6 – Remove Redundant 'Add Notes' Option	4
Issue #7 – Invalid JSON from AI Risk Assessment Workflow	4
 QA Review – Fixed Issues Summary	 4
Issue #2 – No file size or MIME validation	5
Issue #3 – URL is not validated	5
Issue #4 – Character limits inconsistent	5
Issue #5 – Validation messages are idea-specific for all sources	5
Issue #11 – Two disconnected records per submission	6
Issue #12 – Retry after webhook failure duplicates rows	6
Issue #17 – Poll loop leaks after navigation	6
Issue #21 – Raw Supabase/Postgres errors shown to end users	6
Issue #22 – Report download fails silently	7
Issue #24 – No auth guard on protected routes	7
Issue #27 – “Forge Idea” enabled with an empty form	7
Issue #30 – Re-run Agent only available on completed agents	7

AI Product Discovery – Issue Log

Issues identified and resolved during functional testing of the AI Product Discovery application.

Issue #1 – Duplicate Analysis Records

Priority	● High
Observation	Duplicate records were created for the same analysis.
Root Cause	Application created a new analysis without checking for an existing active one.
Fix Applied	Reused the existing analysis_id instead of creating duplicate records using application logic.
Status	✓ Fixed

Issue #2 – Continue Opens Empty Discovery Galaxy

Priority	● High
Observation	Pending analyses opened an empty Discovery Galaxy with all values at 0%.
Root Cause	Analysis context and execution state were not restored before navigation.
Fix Applied	Restored the existing analysis state and resumed the pending analysis correctly.
Status	✓ Fixed

Issue #3 – Dashboard Recommendation Cards

Priority	● Medium
Observation	'Avoid Implementation' and 'Ready for Implementation' displayed the same product.
Root Cause	Both cards referenced the same highest-confidence record.
Fix Applied	Ready card now displays the highest confidence score, while Avoid card displays the lowest confidence score.
Status	✓ Fixed

Issue #4 – Website URL Validation

Priority	● High
Observation	Any non-empty string was accepted as a URL.

Root Cause	Missing HTTP/HTTPS URL validation before submission.
Fix Applied	Added proper URL validation before starting analysis.
Status	✓ Fixed

Issue #5 – URL Analysis Flow

Priority	● High
Observation	Users were redirected to Discovery Galaxy even when URL analysis failed.
Root Cause	Navigation occurred before URL validation and content extraction.
Fix Applied	Validation and preprocessing now occur first. Errors remain on the New Analysis page and Discovery Galaxy opens only after successful preprocessing.
Status	✓ Fixed

Issue #6 – Remove Redundant 'Add Notes' Option

Priority	● Low
Observation	'Add Notes' duplicated the functionality already available in the 'Your Idea' tab.
Root Cause	Overlapping input methods created unnecessary redundancy.
Fix Applied	Removed the 'Add Notes' option from the input section.
Status	✓ Fixed

Issue #7 – Invalid JSON from AI Risk Assessment Workflow

Priority	● High
Observation	JSON.parse() failed with 'Expected ',' or '}' after property value'.
Root Cause	The AI response contained an 'updated_at' field that caused malformed JSON in the n8n workflow.
Fix Applied	Removed the 'updated_at' field from the AI Gap Analysis node in the Risk Assessment n8n workflow.
Status	✓ Fixed

QA Review – Fixed Issues Summary

Issues identified during the independent QA review pass and confirmed as resolved.

Issue #2 – No file size or MIME validation

Priority	● High
Observation	See QA review.
Root Cause	Identified during QA review.
Fix Applied	Added file size and MIME type validation.
Status	✓ Fixed

Issue #3 – URL is not validated

Priority	● High
Observation	See QA review.
Root Cause	Identified during QA review.
Fix Applied	Implemented HTTP/HTTPS URL validation.
Status	✓ Fixed

Issue #4 – Character limits inconsistent

Priority	● Medium
Observation	See QA review.
Root Cause	Identified during QA review.
Fix Applied	Character limits enforced and aligned across UI and schema.
Status	✓ Fixed

Issue #5 – Validation messages are idea-specific for all sources

Priority	● Medium
Observation	See QA review.
Root Cause	Identified during QA review.
Fix Applied	Added live validation messages and source-specific guidance.

Status	✓ Fixed
--------	---------

Issue #11 – Two disconnected records per submission

Priority	● High
Observation	See QA review.
Root Cause	Identified during QA review.
Fix Applied	Unified analysis flow to avoid disconnected records.
Status	✓ Fixed

Issue #12 – Retry after webhook failure duplicates rows

Priority	● High
Observation	See QA review.
Root Cause	Identified during QA review.
Fix Applied	Prevented duplicate analysis creation during retry.
Status	✓ Fixed

Issue #17 – Poll loop leaks after navigation

Priority	● High
Observation	See QA review.
Root Cause	Identified during QA review.
Fix Applied	Improved polling lifecycle to avoid unnecessary reads and memory leaks.
Status	✓ Fixed

Issue #21 – Raw Supabase/Postgres errors shown to end users

Priority	● Medium
Observation	See QA review.
Root Cause	Identified during QA review.

Fix Applied	Mapped technical errors to user-friendly messages.
Status	✓ Fixed

Issue #22 – Report download fails silently

Priority	● High
Observation	See QA review.
Root Cause	Identified during QA review.
Fix Applied	Display an error message when report generation fails.
Status	✓ Fixed

Issue #24 – No auth guard on protected routes

Priority	● High
Observation	See QA review.
Root Cause	Identified during QA review.
Fix Applied	Redirect unauthenticated users to the login page.
Status	✓ Fixed

Issue #27 – “Forge Idea” enabled with an empty form

Priority	● Medium
Observation	See QA review.
Root Cause	Identified during QA review.
Fix Applied	Forge button disabled until a valid input is provided.
Status	✓ Fixed

Issue #30 – Re-run Agent only available on completed agents

Priority	● Medium
Observation	See QA review.

Root Cause	Identified during QA review.
Fix Applied	Added retry actions for failed agents.
Status	✓ Fixed
